

ADSL, ADSL2 & SHDSL

MOST COST-EFFECTIVE. NATIONWIDE COVERAGE. INTERACTIVELY SELF-MANAGED.

With a national coverage footprint of over 2700 exchanges in every state and territory of Australia and access to 4 separate tier 1 carrier DSLAM networks, our network is the nation's premier wholesale DSL access network.

Whether you're providing internet or private networking solutions, you can easily combine multiple carriers DSL tails into a cost effective solution that works for both you and your customers. Services can be handed off on a state by state basis or they can be nationally aggregated back to a single location, saving you the need to build your own national network.

Benefit from consistently high downstream bandwidth, data speeds up to 20 Mbps for ADSL2 and 4Mbit for SHDSL. Our services can be delivered as either Layer 2 or Layer 3, providing you the flexibility to design and implement solutions exactly as you require them.

Our Virtual Internet Service Provider (VISP) solution, provides you with the equipment and billing systems required to deliver your customers with custom Voice and Data solutions.

All of our ADSL, ADSL2 and SHDSL products can be quickly and easily self managed at any time of the day via our online portal, features include:

- Super-fast service ordering in three simple steps
- Tools to qualify, quote, order and provision services
- Feature/cost comparisons of each product
- Service qualification (SQ) tools to view all services available at a given address
- Lodgement of faults directly with the provider
- Visibility of fault history/progress

ADSL, ADSL2 & SHDSL

FEATURES

- National footprint
- Access to 4 Tier 1 provider networks
- High downstream bandwidth
- Layer 2 and Layer 3 service delivery options
- Multiple providers can be tied into single, connected solutions
- Completely automated via The Platform portal
- Very simple installation - requires no interaction with the end user
- Connectivity within days

TECHNICAL SPECIFICATIONS

- ADSL1 Speeds up to 8 Mbps down and 384 kbps up
- ADSL2 speeds up to 20 Mbps down and 1 Mbps up
- SHDSL speeds up to 4 Mbps down and 4 Mbps up
- MPLS Capable
- Customer defined contention ratio's

MPLS PRIVATE NETWORK

- Increased performance/reduced operating costs
- Complete end-to-end linking
- Scalable - quickly integrate new applications
- Tailored to needs of each customer
- Set priorities - critical information flow takes precedence
- Multiple alternate paths - near instant rerouting in the event of a network component failure

COMPETITIVELY PRICED

We offer pricing structures to suit every business and traffic need. Available online via The Platform.
